Please insert the following in the Summary Of The Invention portion of the specification at the beginning of line 11 on page 3.

--Thus, in one aspect, the present invention is a status information sharing system for managing status information of users who handle user terminal devices, comprising user status recognizing means for recognizing statuses of the users who handle the user terminal devices, schedule information retrieving means for retrieving present schedules from schedule information of the users, and status information generating means for generating status information of the users based on the statuses of the users recognized by the user status recognizing means and the present schedules retrieved by the schedule information retrieving means.

In another aspect, the present invention is a user terminal device that is capable of communicating with a server device managing schedules of users who handle the user terminal device, comprising user status recognizing means for recognizing statuses of the users who handle the user terminal device; and status information receiving means for receiving status information, which is generated based on the status of the user recognized by the user status recognizing means, from the server device.

In yet another aspect, the present invention is a server device that is capable of communicating with user terminal devices, comprising schedule information retrieving means for retrieving present schedules from schedule information of users who handle the user terminal devices, user status retrieving means for retrieving statuses of the users, and status information generating means for generating status information of the users based on

the present schedules retrieved by the schedule information retrieving means and the

statuses of the users retrieved by the user status retrieving means.--
